

FAASTeam presents:

Boeing Field King County International Airport (KBFI)

Boeing Field King County International Airport (KBFI) continues to be at the higher end of Class D airports when it comes to TCAS RAs. At KBFI, there is approximately 1 RA every 48 flight operations by TCAS equipped aircraft. The trend is seasonal and increases with the good VFR weather and traffic volumes that often accompany the weather. There are some areas that are more likely to generate TCAS RAs and some of the RAs are caused by interaction with arrival traffic into Seattle Tacoma International Airport (KSEA).

The BFI ATCT briefing will provide data where the RAs are likely to occur and some mitigations that may help to reduce the frequency and provide some extra margin of safety.

Directions: The Presentation will take place in the conference room at the basement of Modern Pilot. Access to the basement is on the left side of the building.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
